

CHAPTER 4: SCAN & FILTER STOCKS

Once you have a target industry, this step uses tools to filter out the most potential stocks in that industry. Target: from thousands of stocks → reduced to 10-20 candidates.

4.1 Barchart — Screener kỹ thuật

Barchart.com provides a powerful screener with real-time technical data.

Suggested technical filters on Barchart:

- **100% Buy hoặc Strong Buy (Overall opinion)**
- **20-Day Moving Average tăng + Above 50-Day MA**
- **Today's Volume > 20-Day Average Volume (1.5x)**
- **Filter by capitalization: Large Cap (>10B) to reduce volatility risk**
- **Select the correct sector identified in Chapter 3**

4.2 IV Percentile (IV%) — Bộ lọc cho Options

IV Percentile (or IV Rank) indicates whether Implied Volatility is currently at a high or low level compared to the history of the past 1 year.

IV Percentile Strategy

IV% < 25 → IV thấp → Buy options (Long Call/Put, Debit Spread) — options are cheap

IV% 25–50 → Neutral Zone—flexible both strategies

IV% > 50 → IV cao → BÁN options (Short Put, Iron Condor, Strangle) — options are expensive

IV% > 75 → very high IV → Sell the strongest premium, high event risk

Note: IV usually rises before earnings, drops sharply after earnings (IV Crush)

Công cụ xem IV%: Barchart (cột IV Percentile), Tastytrade platform, Market Chameleon.

4.3 Finviz — Composite Screener

Finviz.com is a comprehensive stock filtering tool that combines both technical and fundamental.
